POST PROCEDURE INSTRUCTIONS FOR LESION TREATMENT

After the area(s) have been treated by the doctor, a moleskin pad will be applied. This is to remain in place approximately 24 hours or at least overnight. The moleskin can be removed before next shower or bath and no further dressing / bandage is needed.

Depending on the size and location of the lesion, the affected area can become sore or even uncomfortable within a day or two of treatment but this usually lasts approximately one day. It is also normal to have a blister or dark skin appear in the treated area.

If you have questions or concerns, please call the office at:

(913) 894-4040 or toll free 1-866-767-3338.

On weekends or after office hours, these numbers will direct you to the doctor's pager.

Thank you for choosing Kansas City Podiatry.
